Dutch Seminar on Optimization: submit a talk proposal

The call is open for 2x contributed PhD talks for the Dutch Seminar on Optimization slot on Thursday June 27th (4pm-5pm). To recall, each PhD talk is 25 mins + 5 mins for questions, and can be on any topic of interest to the optimization and theoretical computer science community. I would like to stress that this is a great opportunity to give a talk in a friendly environment and to get feedback from your peers.

To submit a talk proposal, please fill out the following google form by ***Friday May 31st 2024***:

[Dutch Opt: PhD Talk Proposal (June 27th, 2024) (google.com)](#)

(You should be able to edit after submission in case you want to change something before the deadline.)

In the form, you are asked to provide basic biographical information as well as the title and abstract of your talk. You are also highly encouraged to provide a link to the relevant paper(s) as well as a link to your website (with your research publications), though these are not required. The talks will be evaluated by the organizational committee based on the quality of the proposed talk. Preference may be given to candidates who are closer to graduation, or candidates who have submitted more than once. The 2 selected speakers will be informed by ***Thursday June 4th***.

Recall that we have 2 calls per semester, so if your talk doesn't get selected this time around, you are more than welcome to submit your talk again.

The selection members of the selection committee for this semester are:

Daniel Dadush (CWI & UU, chair), Christopher Hojny (TU/e), Pieter Kleer (Tilburg), Tim Oosterwijk (VU)

Feel free to forward this call to anyone who might be interested.

On behalf of the organizers,
   Daniel Dadush
